Mountain Weather Forecast

Brecon Beacons National Park

Forecast valid from 00:00 on Monday 28 Sep 2020 until 23:59 on Tuesday 29 Sep 2020

Forecast Issued on Sunday 27 Sep 2020 at 17:18

Confidence: High confidence for generally changeable conditions during this coming week with alternating periods of rain and drier spells. Moderate confidence for the timing of a front moving west to east across Wales on Monday and for a spell of wet and windy weather on Wednesday. Low confidence in the shape of the low pressure and the proximity of it to Wales by the end of the week and therefore the details of rain/showers and the strength of the winds from Thursday.

Headline for Monday 28 Sep 2020: Clouding over with patchy rain and drizzle spreading east during the afternoon.

Mountain weather hazards on Monday 28 Sep 2020

Blizzards No Likelihood	**Heavy Snow** No Likelihood	**Storm force winds** No Likelihood
Gales No Likelihood	**Severe chill effect** No Likelihood	**Poor visibility** Low Likelihood
Thunderstorms No Likelihood	**Heavy persistent rain** No Likelihood	**Strong sunlight** No Likelihood

Forecast for Monday 28 Sep 2020

Weather: Dry and cold with clear periods during the overnight hours and a patchy frost developing. Starting dry on Monday morning with bright spells at first, but clouding over through the morning with patchy light rain and drizzle arriving from the west during the afternoon and evening.

Chance of cloud free mountain/hill tops above 600m: 60% becoming 30% by late morning. Periods of cloud in the west above around 500-700m from dawn, this becoming widespread and persistent across the area by late morning. Fairly persistent cloud above 500-550m during the afternoon with occasional patches on west facing slopes as low as 400m. More broken in the north and east with a few fleeting brighter spells likely.

Visibility: Generally good but nearby hills disappearing during periods of rain and drizzle through the afternoon. Poor or very poor in hill cloud.

Meteorologist's View

Drizzly rain may become persistent for 3 or 4 hours during the afternoon, although it is unlikely to be heavy. Some eastern hills may not see more than a few light showers.

Recent rainfall: measured at Neuadd: altitude 353m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
14:00 on Sun 27 Sep 2020	0mm	0.2mm	0.6mm

Forecast for Tuesday 29 Sep 2020

Weather: Some patchy valley fog to begin the day, but this lifting and clearing by the middle of the morning. It will then generally be a dry day with broken cloud and sunny intervals. The sunniest conditions will be during the middle of the afternoon before clouding over by the evening.

Maximum wind: Southwest 10-15 mph. Local gusts of 25 mph possible by the evening.

Chance of cloud free mountain/hill tops above 600m: 80%. Occasional patches above 800m at first. Clouds generally rising above all summits through the morning.

Visibility: Generally very good with distant hills and landmarks clear to see, however visibilities will locally be poor in any hill cloud.

Temperature: **Valleys:** Plus 3 Celsius rising to plus 17 Celsius.
At 600m: Plus 9 Celsius.
Freezing level: Well above the summits.
